We're investing to upgrade the power supply

Hello. We're SP Electricity North West and we operate your local electricity network.

We're carrying out crucial upgrades on the power network in Oldham, investing £13m.

The work we are carrying out will see new underground electricity cables installed and upgrades carried out at local substations. The work will benefit 42,000 homes and businesses and allow for more people to connect low carbon technologies such as electric vehicle chargers and heat pumps. The work will improve the overall reliability of the local electricity network whilst also reducing the risk of pollution from the old cables we are replacing.

A lot of our network was installed back in the 1950s and 60s so it is vital work happens now as we become more reliant on electricity. We are working closely with Salford Council to minimise disruption.

How this will affect you

- Temporary traffic lights will be used to keep engineers safe whilst they work work will start work on **Friday 13th February until Monday 23rd February 2026**, on **Broadway and Broadgate**.

Two teams will be working 24/7 to carryout this work with the least disruption to traffic and the community as possible.

- Access to properties will be maintained throughout all of the project
- All works taking place have been agreed with the local council
- Local electricity supplies should not be affected by the works

Throughout the project, we'll do our best to keep disruption to a minimum.
